# .Customer Portal Login

Steps to Follow:

1.User Login page:

 User Enter email Id and Password.

1.2. if user forgot the password at that time. user enter email id. And user click on "Click Here" button .

if user click on that button then user receive a Mail .In that user need to rest the password.

if password is updated it shows "password updated successfully", then user Redirects to login page.

2.If User Enter Invalid password >=5 at that time Account is locked .

2.1 At that   time user receives a mail then .user need to reset the password.

2.2.if password is updated it shows "password updated successfully", then user Redirects to login page.

3.if user Enter valid Email id and password

. Authentication: if user has not completed two step authentication in registration process

then user login to the portal with registered email id and password ,

at that time it will ask for two step authentication process.

if user is already registered in two step authentication process,

then user enter verification code.

. If verification code is invalid at that time back to Verify your identity..

4. If User Enter Valid Code ,It's display "Verification Success".

5.. If Verification is success But It's display   password is expired. At that time user click on "Continue" button .In that User reset the password.

5.1: if password is updated it shows "password updated successfully", then user Redirects to login page.

If User Password is not Expired at that User Enter into the Dashboard.

6 .User Successfully Enter into the Dashboard.
